see i want to build a console-based program that generates funny roasts based on a user's name. The program should produce different roasts each time it runs by randomly selecting from multiple roast templates. For example: If the Input is Rahul, then the possible output can be:
"Rahul writes code so slow that even a turtle switched to Python."
use the following programme:
1.Takes user input (name)
2. Stores multiple roast templates
3.Uses random selection to generate different roasts

Show more

Thought for a couple of seconds

Bhai ye raha pure C++ console-based basic roast generator program.

```
C++
#include <iostream>
#include <cstdlib>
#include <ctime>
using namespace std;

int main() {
    string name;
```

make its more better templates (only 10 templates) make them more humorous

Thought for a couple of seconds

Bhai ye lo same pure C++ program, but ab sirf 10 better and more humorous roast templates hain:

```
C++
#include <iostream>
#include <cstdlib>
#include <ctime>
using namespace std;

int main() {
    string name;

    cout << "Enter your name: ";
    getline(cin, name);

    string roasts[] = {
        "{name} writes code so slow that even Windows Update finished first.",
        "{name}'s code has so many bugs, even the bugs are reporting bugs.",
        "{name} debugs by changing random lines and ↓ ing it artificial intelligence.",
        "{name}'s logic is so weak, even if-else statements are confused.",
        "{name} writes code like a horror movie - everyone screams when it runs.",
        "{name}'s compiler doesn't show errors anymore. It just sleeps deeply."
    };

    int index = rand() % roasts.size();
    cout << roasts[index] << endl;
```
